How to Build Your Own Home UC Lab in vmware Workstation

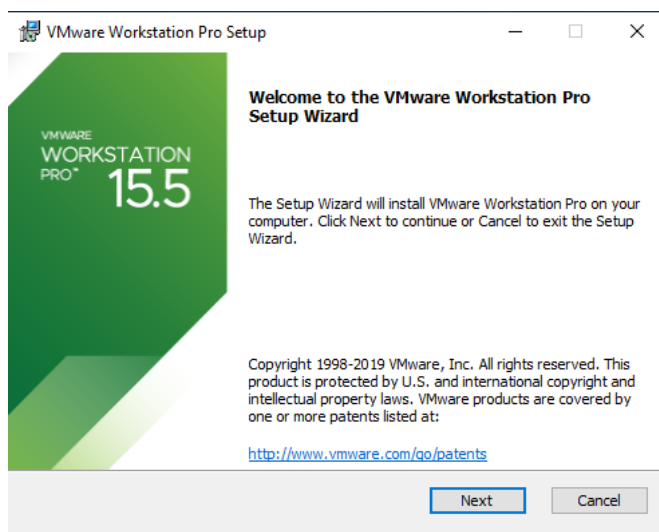

- The complete UC lab you can set up on your laptop / workstation if you have enough RAM
- Even without large amount of RAM, you can still setup a miniature lab for practice
- You need to have vmware Workstation to build the lab, download and install vmware workstation

Step 1: Enable virtualization Intel VT-X from BIOS

- This step differs for each laptop / desktop manufacture
- You should find a way to enable Intel VT-X from BIOS. Google to find the way to enable it based on you manufacture

Step 2: Install vmware Workstation

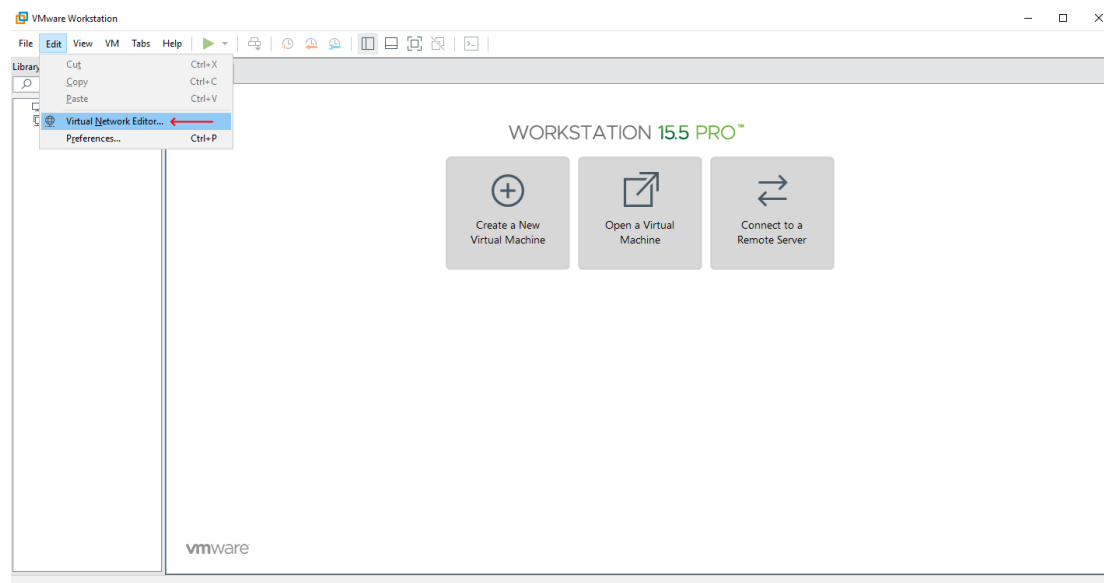

- Installation is pretty straight forward, just Next, Next, Finish

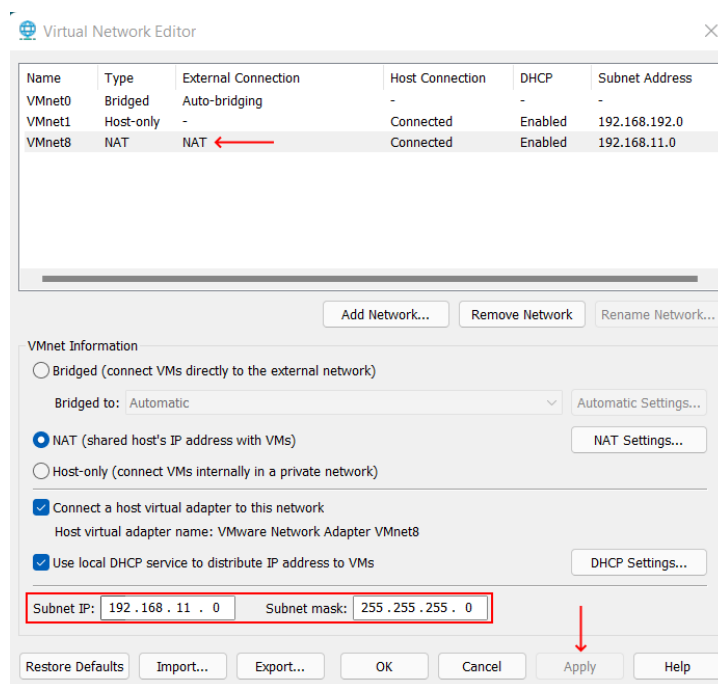

Step 3: Identify vmware NAT Network Settings

Once you complete the installation, open vmware Workstation

Go to Edit >> Virtual Network Editor

- Select the VMnet8 (NAT) and check the IP Subnet

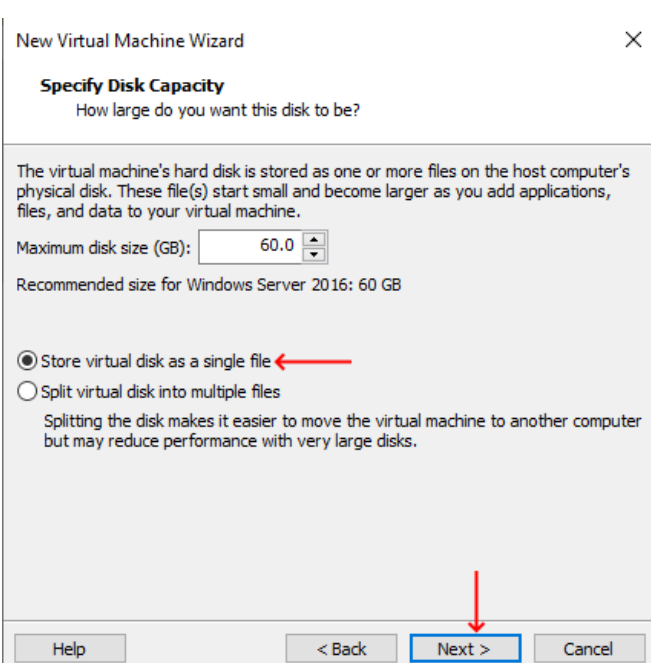

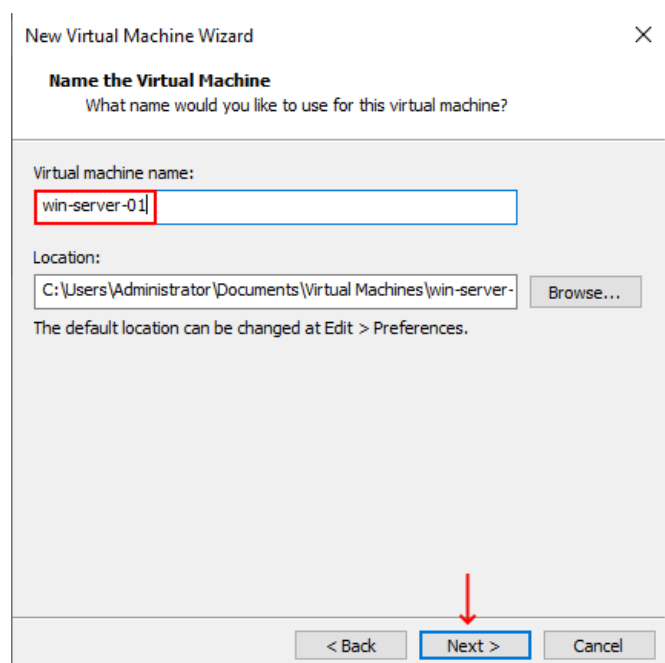

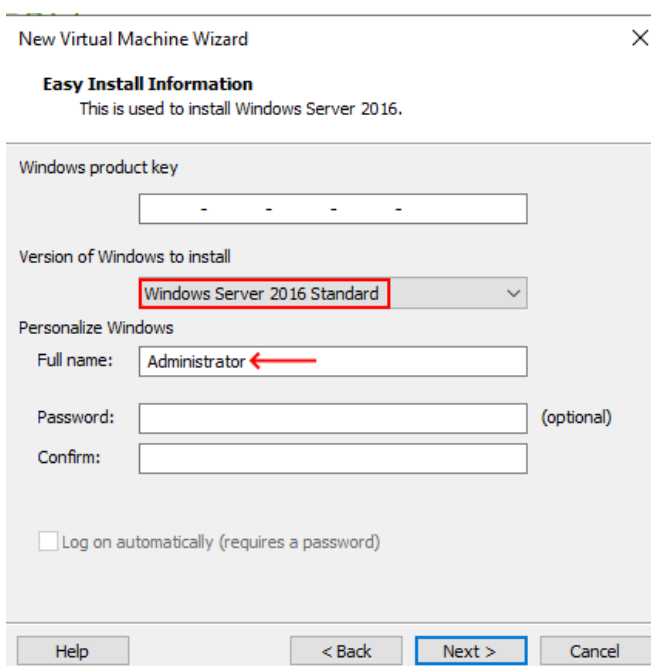

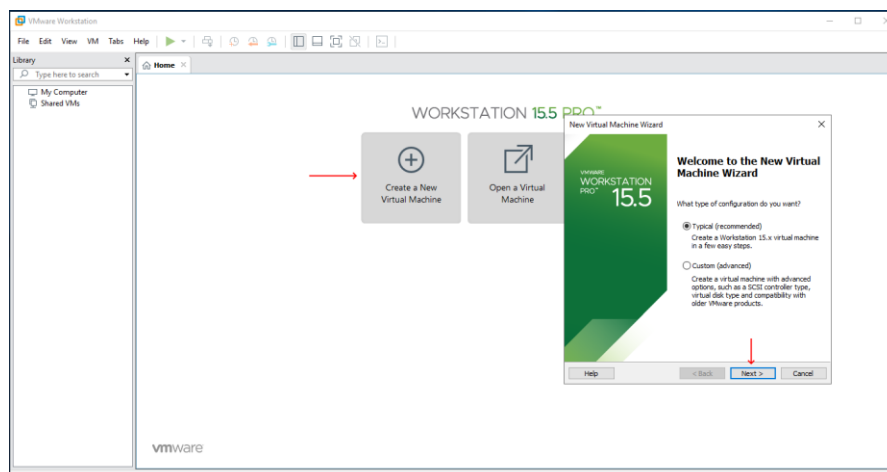

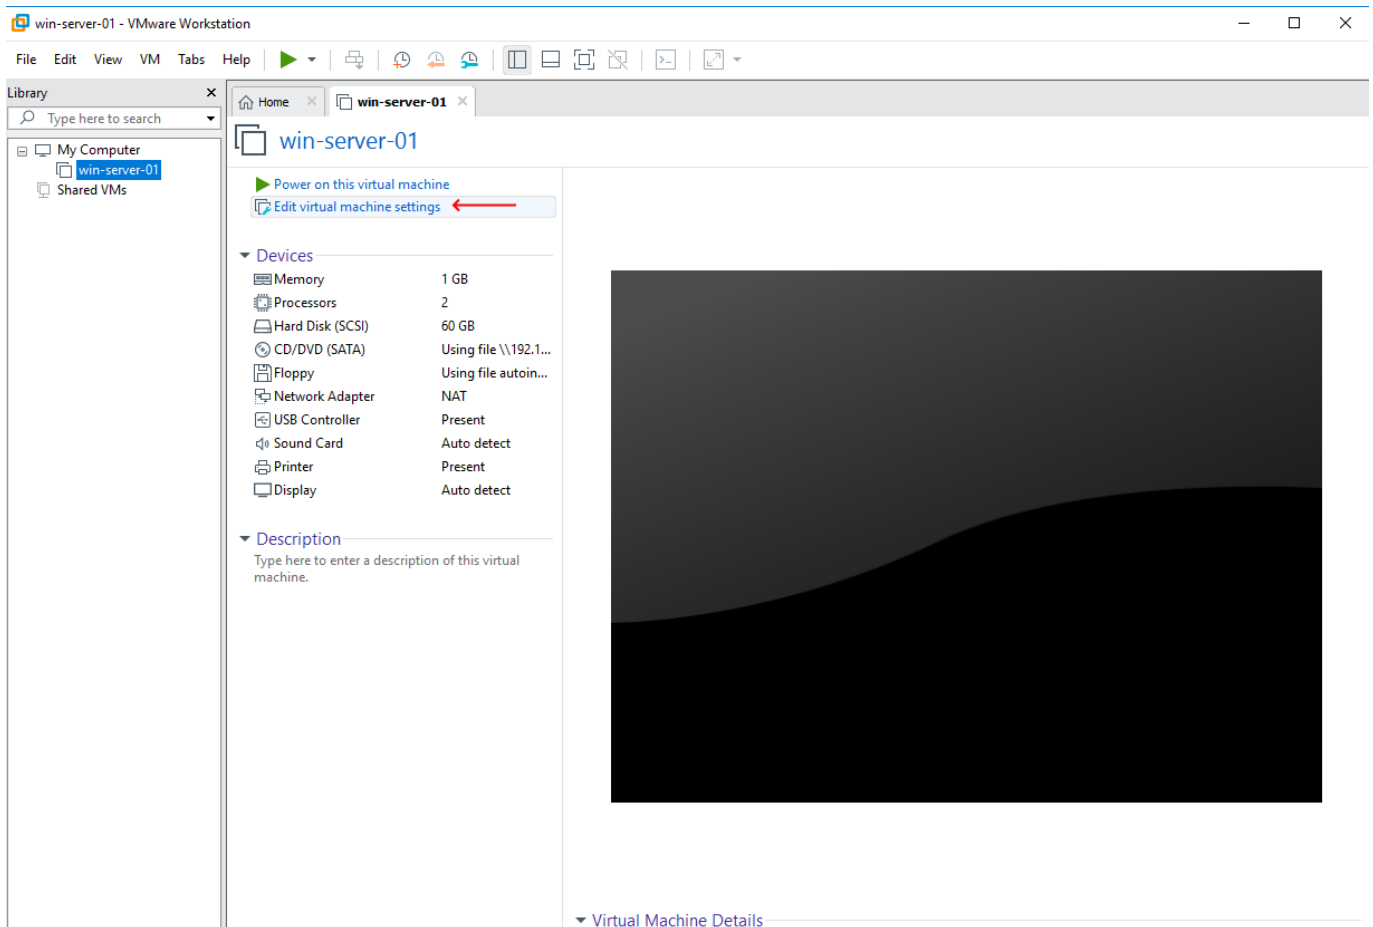

- Here my NAT Network is 192.168.192.0 and Subnet Mask is 255.255.255.0, hence below IP configurations can be used for UC Servers

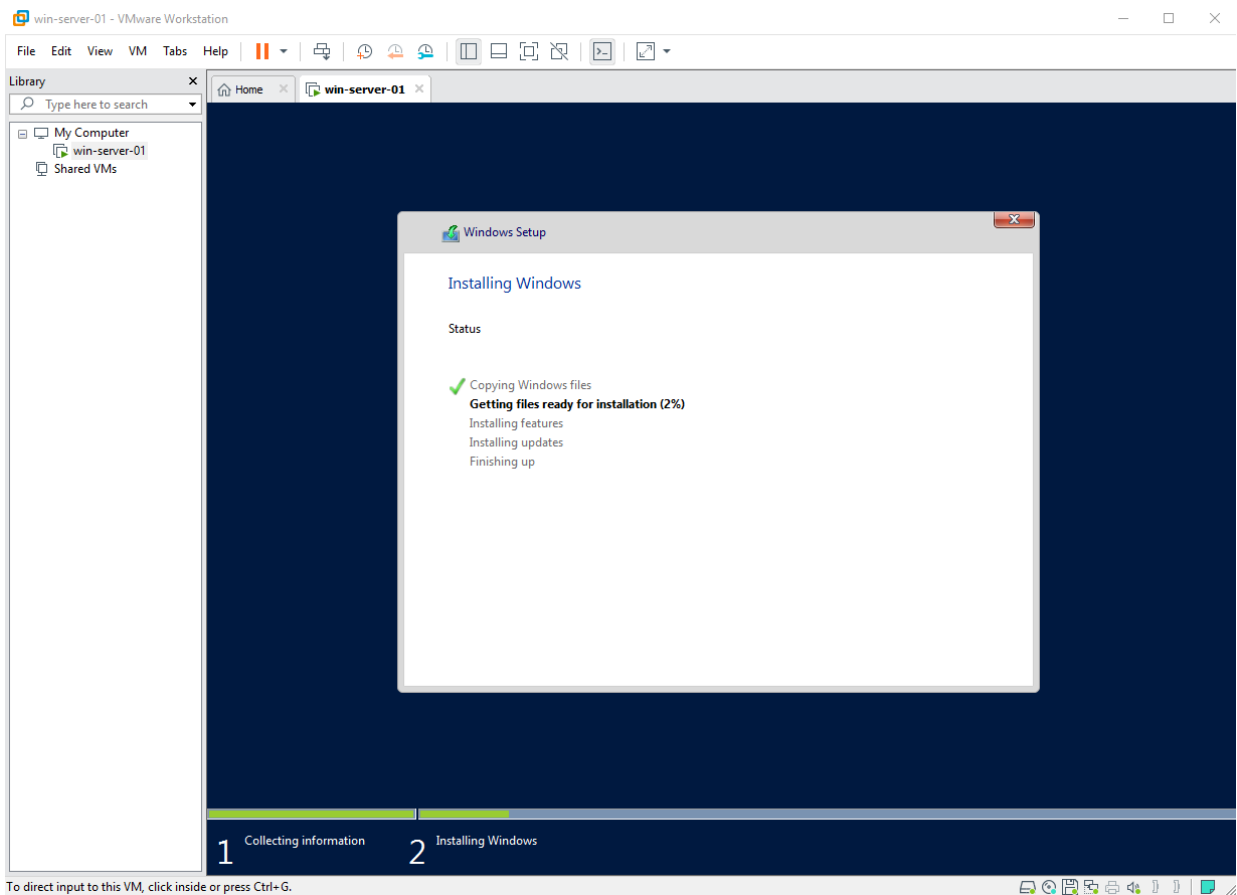

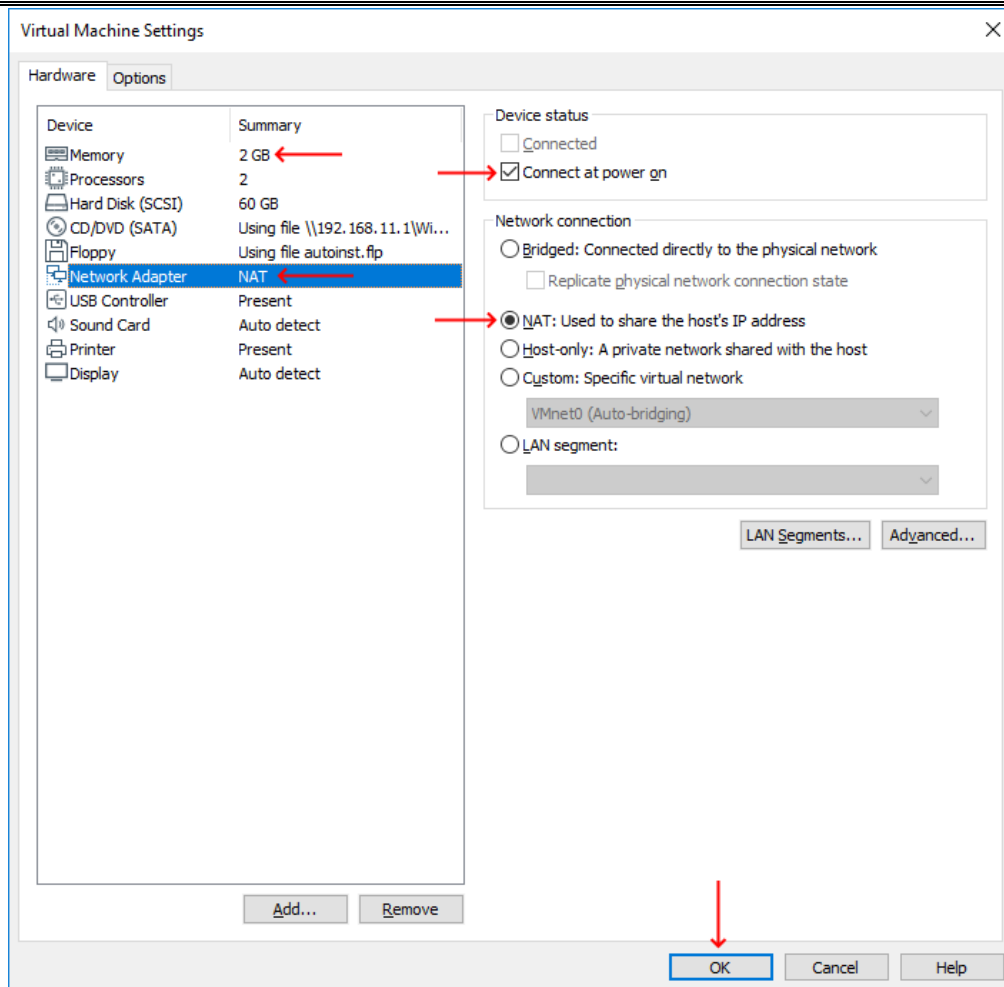

Network	192.168.11.X / 24
Subnet Mask	255.255.255.0
Starting IP Address	192.168.11.3
Ending IP Address	192.168.11.254
Default Gateway	192.168.11.2
NTP	216.239.35.8

-
- While installing UC Servers, make sure you are connected to Internet since we use Public NTP that is available over internet
 - Now you can deploy Windows Server for AD and DNS purpose and then UC Servers can be deployed
 - For CUCM installation, DNS server is optional, you can install without DNS Server as well but for UCCX installation, DNS is mandatory
 - Here you don't need local any NTP Server, we have used public NTP

Step 4: Install Windows Server

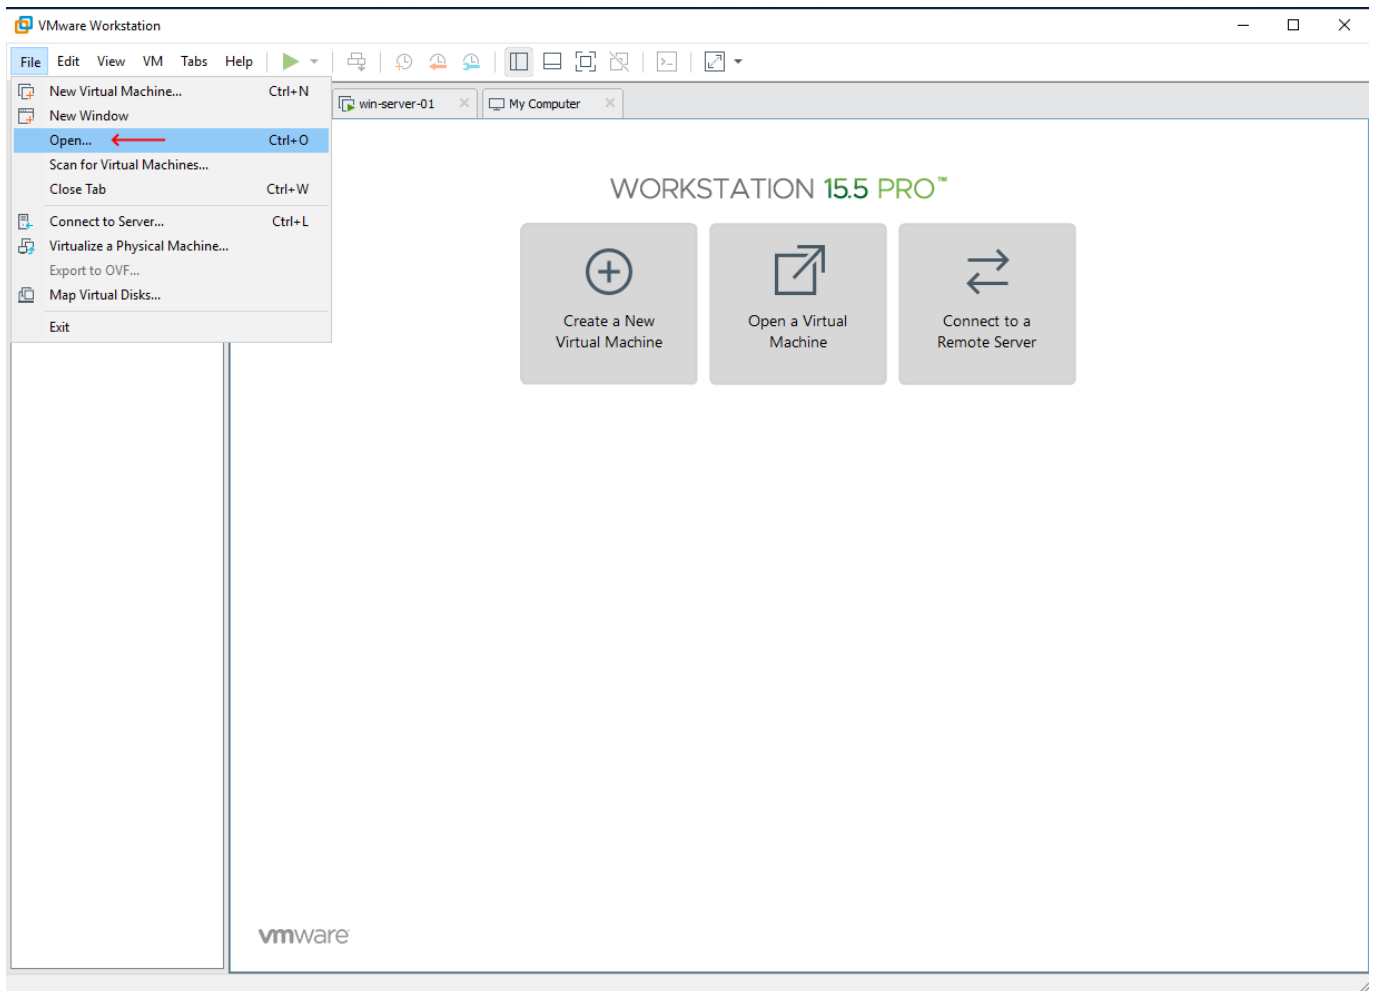

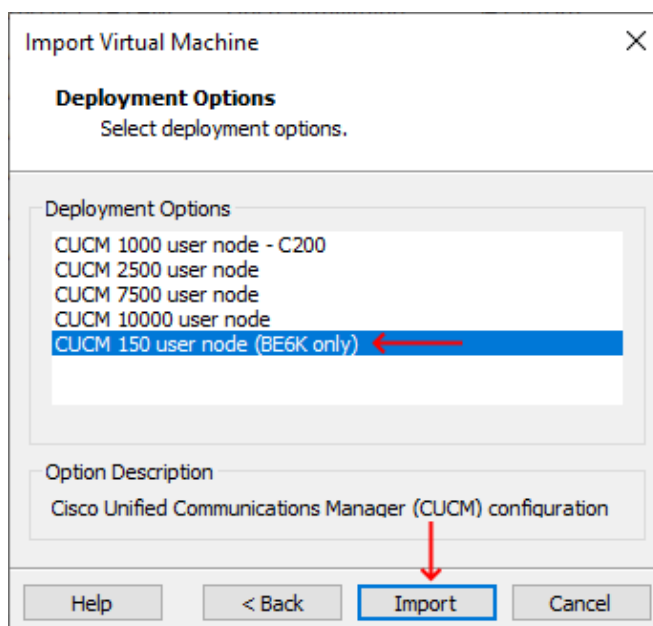

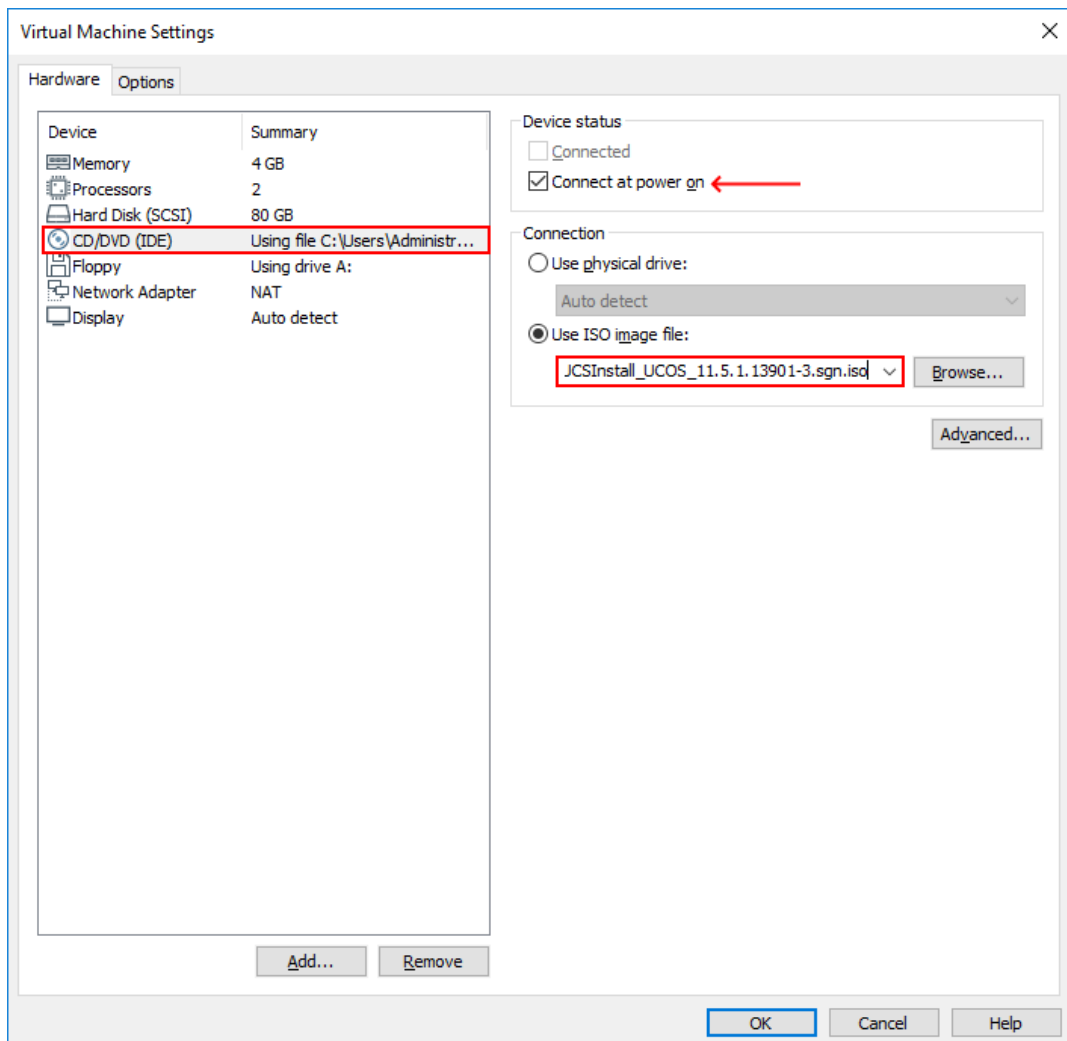

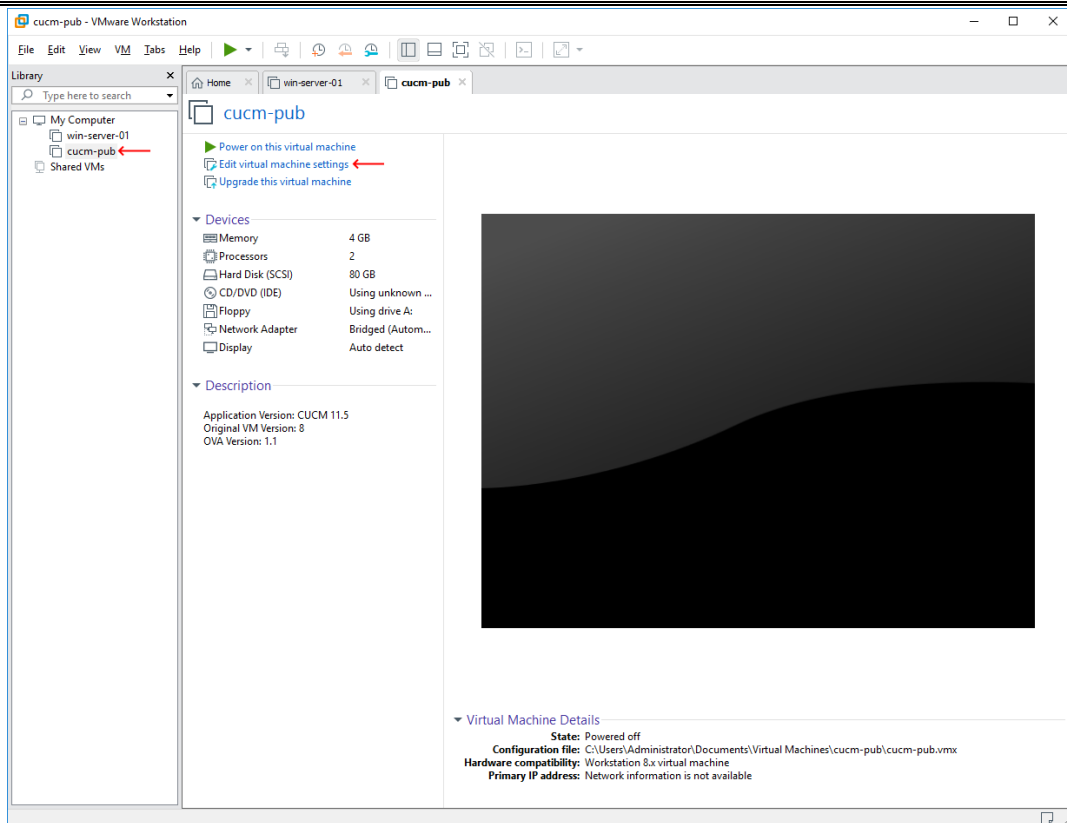

- Once windows installation completed, set a static IP address for it with default gateway 192.168.192.2
- Make sure you are able to access internet from the Windows Machine
- Setup AD and DNS on the windows server and add UC Server DNS A Records before installing CUCM

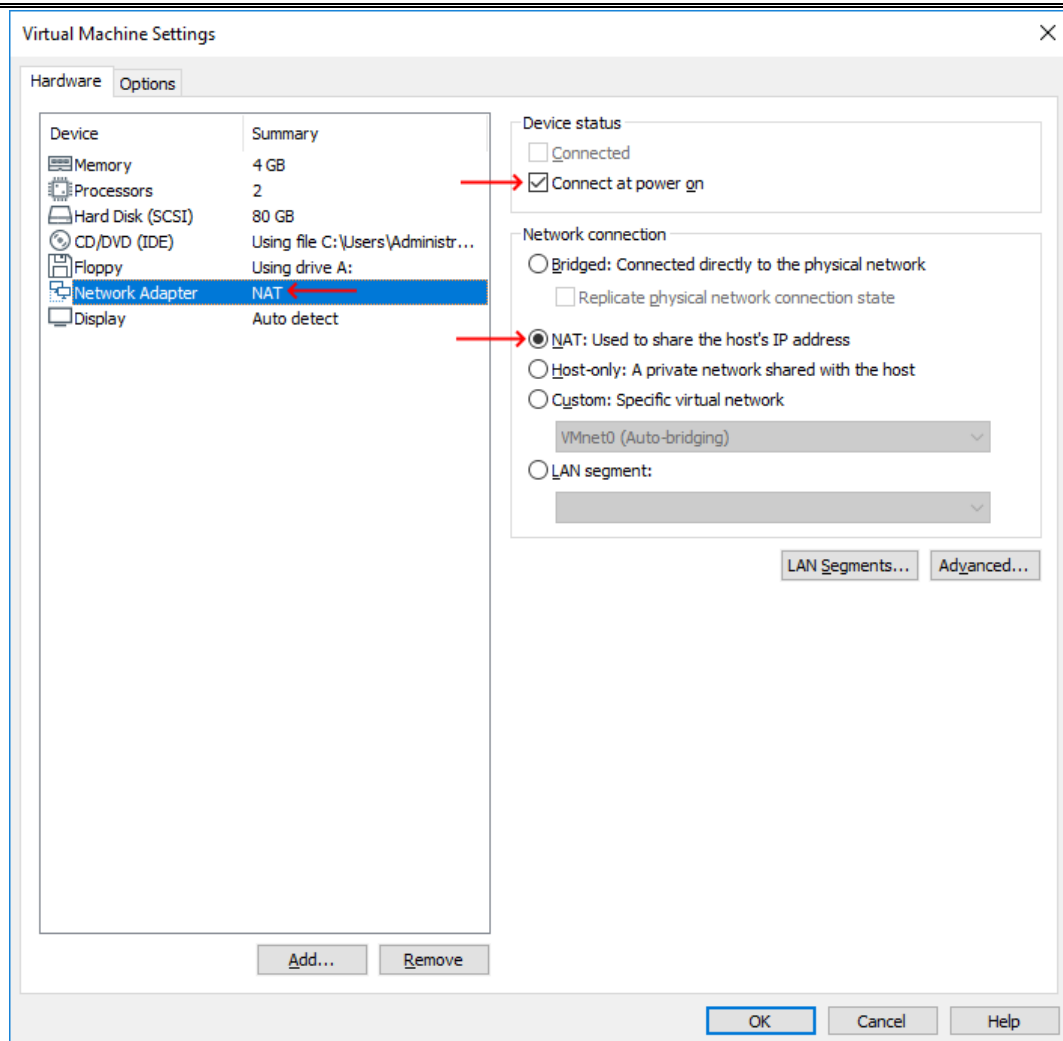

Step 5: Install CUCM

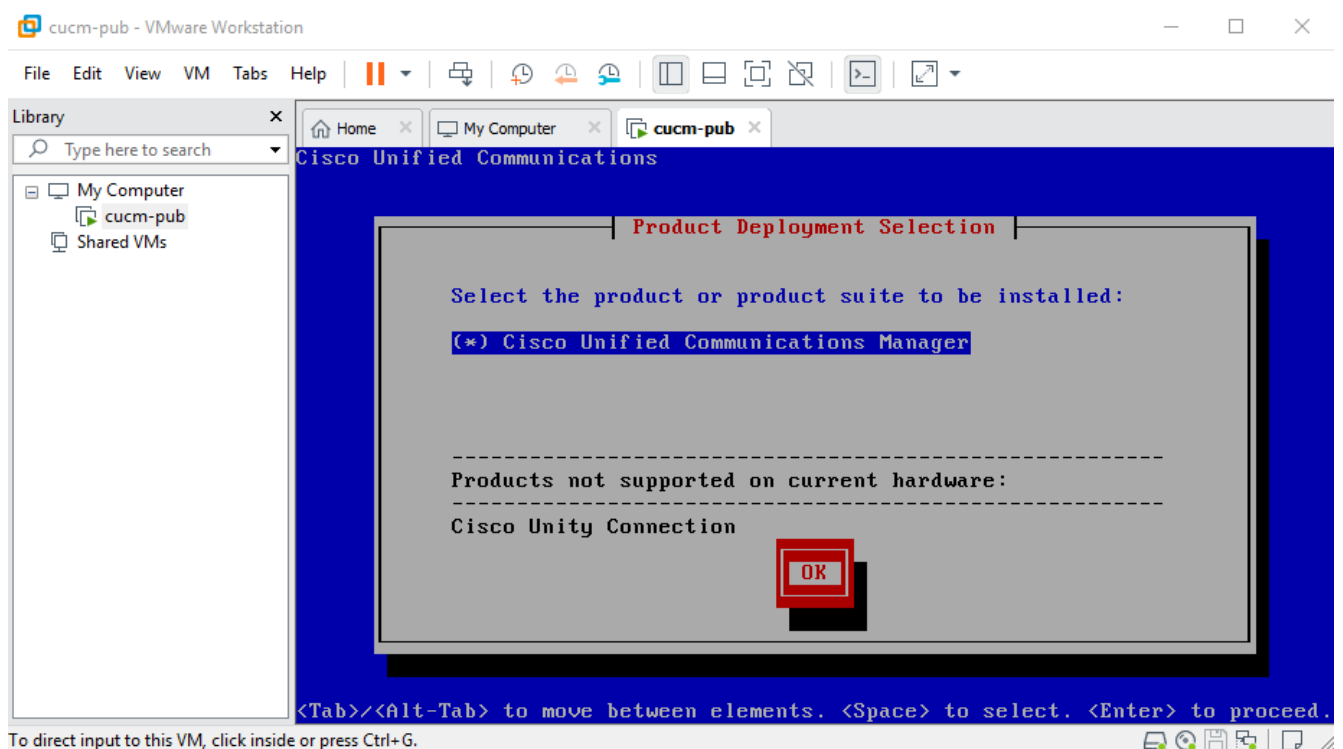

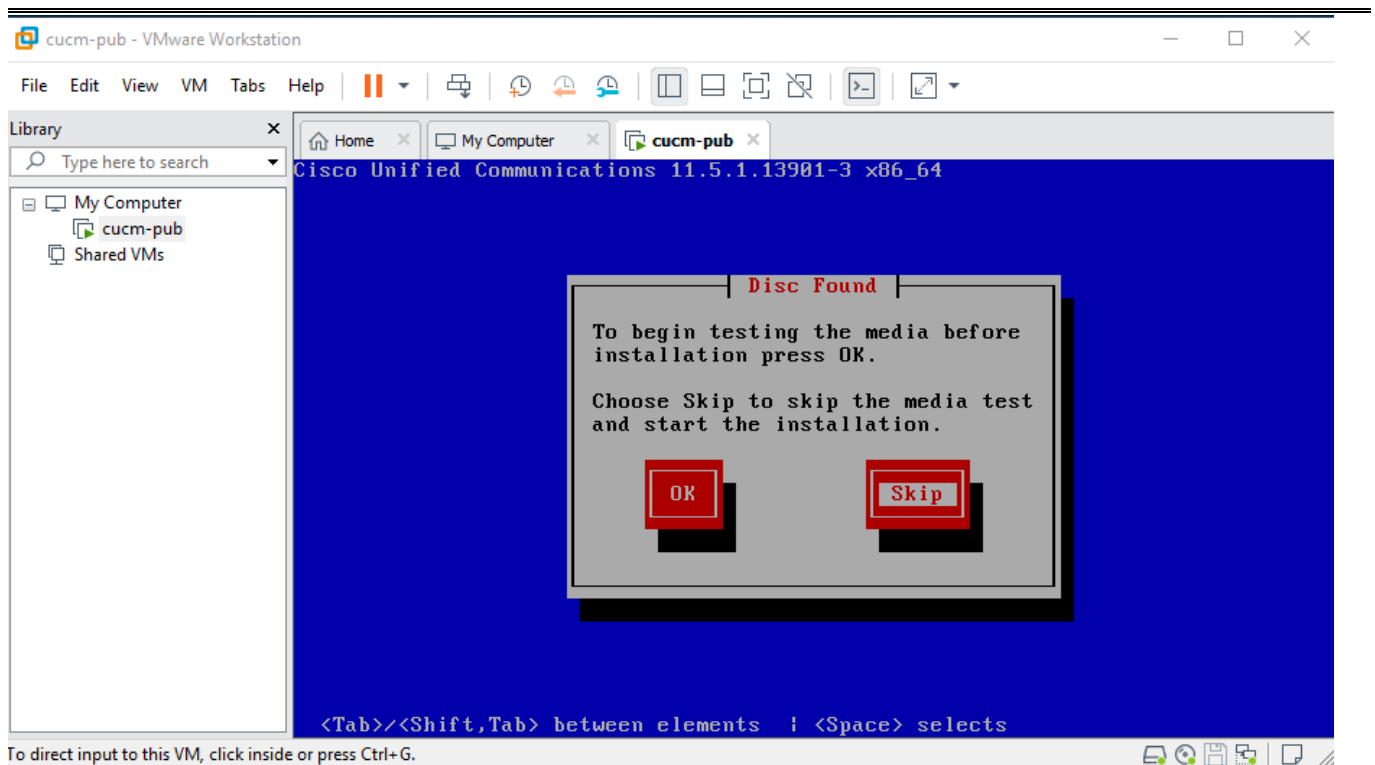

- Download the CUCM OVA
- Open the OVA from vmware Workstation

- You can continue the installation, with below Network Settings

IP Address	192.168.11.X
Subnet Mask	255.255.255.0
Default Gateway	192.168.11.2
NTP	216.239.35.8
DNS Server	Windows Server IP

- It is important to select Network Adapter as NAT
